AUDIT SCOPE:

The duration of the audit included the physical inspection of 1 growing operation, 1 packing facility, 1 harvest crew and the record reviews. The scope of the audit was limited to the watermelon production at the Ray Farm growing operation for Sayre Baldwin Inc. The crop is planted with greenhouse produced plants that are transplanted into raised plastic lined beds. The production area consists of 3 fields with 50.8 net acres of seedless watermelons. The crop is irrigated with drip systems that are supplied from a well. The crop protection water is sourced from a well. The 4-0-8 liquid fertilizer is applied through the drip irrigation system. The adjacent land to the production field is used for crop production, woodland, housing and road frontage. There were harvesting activities being conducted in the field during the time of the audit. The field was planted April 18, May 9, May 31 and June 1-2, 2017. Harvest activities started in the Ray Farm fields on July 26, 2017 and the field will be finished with production in September.
