CERTIFICATE VALID FROM:

Aug 29, 2017 To Aug 28, 2018

AUDIT SCOPE:

The duration of the audit included the physical inspection of 1 harvest crew, 1 growing operation, 1 packing facility and the record reviews. The harvest crew was harvesting watermelons in the Ray Field at Sayre Baldwin Inc. The harvest crew consisted of 23 workers (cutters, loaders, drivers and supervisor) that were using modified harvest buses in the field during the time of the audit. The cutters walk the field, cut the watermelons from the vine and turn them over. The harvest/load personnel pick the watermelons up and toss them to the personnel standing in the harvest buses. The watermelons are stacked in the buses until the desired volume is achieved. The watermelons are delivered to the packing facility for further handling. The loader personnel are provided disposable booties to cover their shoes while standing in the harvest bus. The knives are stored in a designated plastic container when not in use. The knives are sanitized with a 100-200 PPM chlorinated solution before work each day and when ever the personnel leave the field. The company uses a sprayer containing a chlorine solution to sanitize the cargo area of the harvest buses and the packing line at the facility.
